Visual Information is Essential to Make Safe Decisions at Your Facility

Make Your Facility Safe — Make it Visual!

Visual Workplace products and training resources provide all the tools you need to foster visual management processes in your facility.

More importantly, these fast and easy-to-use resources will engage your staff to actively participate in continuous improvement for your company by creating a visual workplace. Success follows success. As your employees become educated on the principles of Visual Management, they’ll learn to see for themselves the opportunities for improvement.*

Benefits include:

- Increased quality
- Increased machine efficiency
- Increased throughput
- Reduced scrap
- Reduced setup time
- Reduced inventory
- Reduced injuries
- Standardized work
- Sustainable workplace organization

* Don’t Take our Word for It!

Here’s a few of the world’s leading companies that use the Visual Workplace Mobile In-House Sign Shop and our other products in their operations:

BASF  
Del Monte  
John Deere  
Energizer  
Kellogg’s  
Pepsi  
Campbell’s  
Snap-on Tools  
Sylvania  
Caterpillar  
General Mills  
Johnson & Johnson  
Harley-Davidson  
Nike

How does your facility score on these safety concerns?

Click here for a comprehensive visual management self-assessment to evaluate where you’re at now and identify opportunities for improvement.
Safety: Protecting Personnel

**Personal Protective Equipment (PPE)**

Do you have the necessary equipment available at the point of use?

Are your PPE instructions clearly displayed and at the point of use?

**Protective Work Instructions**

Do you communicate required personnel protective equipments as part of standard work instructions?

Do you communicate emergency work instructions with visual aids?
Visual At Work

Do you control behavior and communicate in real time?

In this facility everyone is required to wear a hard hat outside the office area.

An unwanted side-effect of this safety program was that delivery truck drivers were frequently walking off with their visitor hard hat — a costly and time-consuming replacement hassle for the company.

To eliminate this from happening, the company implemented a color code system for the hats — with pink specifically designated for truck drivers. Immediately, the hats stopped disappearing!

For company personnel, each employee’s hard hat is individually identified, now making forklift certification and other key information visible at a glance.

Noise

Are high noise areas identified and hearing protection available at the point of use?
Safety: Machine/Equipment

Organize by Color Distinction
Do you use color to communicate differentiation?

Cautionary Work Situations
Do you communicate standard work instructions with visual aids?

Lock Out/Tag Out
Are procedures clearly identified and include the proper items for Lock Out / Tag Out processes?
**Pinch Points**
How do you communicate where it is safe – and where it is not?

**Preventive Measures**
Do you add reminders to prevent injuries?

**Material Handling**
Are the material handling requirements posted at critical paths?
Safety: Facility Instruction

**Do Not Block**

Are electrical panels, charging stations and other designated areas clearly marked and unobstructed?

**Doorways**

Can you see through passage ways and if not, are cautions displayed?
Pipe Markings
Are pipe markings visual to reduce error and eliminate time spent searching?

Maintenance
Is your maintenance area organized to support operational safety?

Deliveries
Are the safety requirements for truck drivers and material handlers displayed at the point of use?
Safety: Workplace Organization

Storage

Are storage requirements clear?
Are material stacking restrictions signified with signage or are the walls color coded to signify the maximum stacking height?

Are aisles unobstructed? Before (above); after (below)
