Lockout/Tagout Padlocks, Devices, Security Seals & Storage

Controlling hazardous energy with a Lockout/Tagout (LOTO) system is an important component of maintaining a safe work environment and protects employees from injury or death that could occur if equipment isn't safely turned off. Energy used to power mechanical, hydraulic, thermal, electrical, pneumatic, water, and other systems needs to be locked out to stop the release of hazardous energy when performing equipment repairs and maintenance. A stored energy release can cause environmental hazards, catastrophic injuries and death.

Comply with OSHA regulations and keep employees safe by making equipment inoperable—**LOCK IT OUT!**

Visual Workplace offers padlocks, lockout devices, tags, labels, hasps, and other devices to support your LOTO system to maintain a safe work environment.

Be aware of federal safety regulations for the control of hazardous energy

- > OSHA compliant
- > Clearly communicates risk in the workplace
- > Provides safety while performing maintenance
- > Prevention of injuries, damage and errors
